

Sliding number lock C4000

Dimensions and mounting arrangement

The sliding number lock consists of an external operating panel and the built-in lock mechanism with integrated boltwork. These are mounted on either side of the door at the specified distance from the edge of the external door plate. The lock mechanism is fastened to the door with four screws size M6. The internal door panelling has to have adequately sized boxouts providing access to the 6 coding bores of the sliding number lock.
