

Double-bit high security keys

Keys for double-bit high security locks S1000, S2500, S2700, S4500, S4700 and S6500

The keys for lock type S6500 are cut from the solid steel blank. All other keys are precision-cut from die castings. Our keys are nickel-plated and are, therefore, highly wear-resistant. For all SECU-locks, we can supply matching rigid keys in four different lengths or hinged keys in two different lengths. Each lock is supplied standard with two keys, but additional keys are available on request. The so-called snap-in key set, designed for very thick doors, consists of a short section, suitable for fastening to a keyring, and a long section, suitable for plugging-in of the key bit required to operate the lock. The length of the longer section is variable according to the application requirements. Duplicate keys are available at short notice, but strictly upon presentation of one of the original keys, in line with the stringent quality assurance policy in force at SECU.

lock type	total key length L (mm)			
	rigid key		rigid and hinge-pin key	
	standard	medium	long	very long
S1000	69,0	114,0	154,5	178,5
S2500	69,0	114,0	154,5	178,5
S2700	80,0	124,5	164,3	188,3
S4500	77,0	122,0	161,5	185,5
S4700	80,0	124,5	164,3	188,3
S6500	81,5	126,5	166,0	190,0
